PROFESSIONAL SUMMARY

Results-driven Front-End Developer with expertise in HTML, CSS, JavaScript, and React, specialising in responsive web design and workflow automation. Proven ability to deliver innovative solutions that enhance user experience and optimise operational efficiency by up to 20%. Skilled in building scalable websites, integrating AI-driven tools, and mentoring teams on IoT projects. Committed to advancing technical capabilities in full-stack development and automation. Fluent in English and conversational in Yoruba.

PROFESSIONAL EXPERIENCE

Front-End Developer & IT Instructor (Intern) — Proxynet Communications *Aug 2022 – Jan 2023*

I-Space Department | Ikeja, Lagos, Nigeria

- Developed responsive and scalable websites for educational platforms, including school competition systems and smart school portals.
- Collaborated with cross-functional teams to deliver high-quality digital solutions aligned with organisational goals, improving operational efficiency by 20%.
- Instructed students in Web Development, IoT, Web Design, and Graphic Design.
- Mentored students on IoT-based projects including sound systems, obstacle avoidance systems, and alarm systems.
- Gained deep experience in end-to-end project lifecycle methodologies and professional development workflows.

Freelance Front-End Developer — Self-Employed

Jan 2022 – Present

Lagos, Nigeria | Remote

- Built fully responsive websites using HTML, CSS, Bootstrap, and JavaScript — both with and without frameworks.
- Collaborated with a team of 10 on a school project (Valencia Project), handling all CSS styling and ensuring cross-device responsiveness. Link: <https://ojoscreate.github.io/valencia-project-school/>
- Demonstrated creativity by integrating interactive, social-app-inspired features in a dog-themed web app (TinDog), improving performance by 15% through code optimisation.
- Continuously expanded toolkit by learning Python, Flask, and new JavaScript frameworks to improve coding efficiency and output quality.

AI & Automation Developer — Self-Employed

Jan 2024 – Present

Lagos, Nigeria | Remote

- Built form-triggered automated workflows using n8n, integrating Google Sheets, Gmail, and Slack with conditional logic for real-time data handling and team communication.
- Developed an AI agent workflow integrating Google Gemini's chat model with memory storage and RSS feed tools, enabling intelligent, context-aware responses.
- Built a conditional automation workflow with rule-based branching to route targeted messages across multiple channels, ensuring accurate data handling and streamlined communication.

KEY PROJECTS

AI Agent Workflow — <https://ojoscreate.github.io/ojosh-web/>

Context-aware chat system integrating Google Gemini with memory storage and RSS feed tools for intelligent, real-time responses.

Automated Workflow System — <https://ojoscreate.github.io/ojosh-web/>

Form-triggered n8n automation connecting Google Sheets, Gmail, and Slack with conditional logic for efficient data management.

Omnifood Website — <https://cute-tapioca-3568f0.netlify.app/>

Responsive food ordering website optimised for speed and cross-device compatibility.

TINDOG Website — <https://ojoscreate.github.io/tindog/>

Conceptual pet adoption platform (HTML, CSS, Bootstrap); improved performance by 15% through code optimisation.

Valencia School Project — <https://ojoscreate.github.io/valencia-project-school/>

Collaborative school project with a team of 10; led all CSS styling and responsive design implementation.

FUNAAB Login Page Clone — <https://ojoscreate.github.io/Funaab/>

Pixel-accurate clone of the Federal University of Agriculture, Abeokuta login page.

Personal Portfolio — <https://ojosh-portf.netlify.app/>

Personal portfolio showcasing projects, skills, and achievements.

Personal Blog — <https://mellow-tartufo-4d20d2.netlify.app/>

Blog site for personal outreach and writing.

Electronic Business Card — <https://unrivaled-cranachan-4db4a3.netlify.app/>

Digital business card with contact info and quick personal overview.
